

Maintenance Management Smartly Simplified

Equipment Maintenance Made Easier

InnoMaint is a cloud based digital solution that serves to simplify maintenance management. It helps you Monitor, Measure & Manage Maintenance Operations of your facilities. InnoMaint addresses your pain points on maintenance management & provides informative reports for making sound decisions.

Flexibility

InnoMaint is built to manage the preventive maintenance for any equipments or assets across any industries.

Adaptability

InnoMaint system can be configured to the way you want to work without changing your existing maintenance process and gives better results.

User Friendly

You need not to be a tech expert to use InnoMaint application, it is designed to make user experience simple and easy.

Cost Effective

Unlimited users access and InnoMaint's pricing model offer you guaranteed to deliver a faster ROI.

KEY FEATURES

Covid Tech Solutions

Enforce adherence to SOP with dynamic information on violations & potential candidates with fever as your business resumes operations.

Geo Fencing & Tracking

Facility Managers and customers can track the current location of the technicians who can only accept service requests nearby Geo Fencing location

Asset Swapping

Exclusive workflow for movement of assets across business location with no impact on ongoing schedules

Mobile Application

Stay connected 24x7 with your team for catching up on correspondence while away from office.

QR Code Generation

Generate & Print QR codes at once & just scan these codes for a view of entire service history & to create a service request for the asset.

Solution Bank

Pre-defined solution bank will assist the service engineers to identify what solution was given for any incident from the historical data.

Attendance Management

Record the attendance of field staff as punch-in & punch-out automatically for tracking their work in various locations.

Energy Metering Solutions

Be proactive in automatic identification of high power consuming units & turn them off automatically regulating the highest utility costs.

Team Collaboration Solution

A smart Walkie Talkie solution for unrestricted communication offering Internal network Feed, RSS Feed along with instant team collaboration.

Maintaining Inventory Levels

Maintain right inventory levels with stock details at fingertips. Map spares to customers & upload spares, in bulk.

Mobile Offline Sync

Work offline on PPM schedules and tickets during disruptions to internet connectivity & update the progress in the system by synchronization while back online.

KPI Dashboard

Being aware of the significance of measurement of performance that drive business decisions, Innomaint provides KPI graphs & charts which are customizable too.

Multi Location Management

The assets can be mapped to business locations and so does users. This ability caters to the current day business setups that operate from varied locations.

AMC & Warranty Management

Track AMC end to end and map asset instances to their respective warranty(service) packages for seamless workflow.

UPCOMING FEATURES

Restroom Management through IOT

Space Management

Vehicle Management-NPR camera

Security Patrolling (QR Code & Google GEO location based)

Visitor Management

Inventory and Procurement

Document Management system

Dynamic workflow with custom reports (Report builder)

INNOMAINT BENEFITS

Effective Management

You can manage the manpower with useful engagement metrics such as customer rating, FTTR, Total hours engaged, On -Time Arrivals etc.

Highly Flexible

Cancel the PPM schedules which are under progress in the current cycle itself and modify ongoing schedules to see the reflection in next cycle onwards.

Auto Generation of Reports

Manage auto generation of bills based on tax configurations.

Operational Consistency

Uphold operational consistency by delivering high quality service in a timelier manner

Meticulous Reports

The rich, insightful, comprehensive & customizable reports provided by Innomaint play a key factor in chalking out strategies on maintenance management & steers decision making.

Rise in FTFR

A service technician can find solutions to issues which he struggles to fix from solutions provided beforehand which leads to rise in First Time Fix Rate(FTFR).

Improved Resource Allocation

Efficient & cost effective allocation of resources is made possible via a centralized allocation & mapping of assets based on location & user group

Uniform loading

With dynamic visibility into workload of each technician you can ensure that the distribution of work is even and fair.

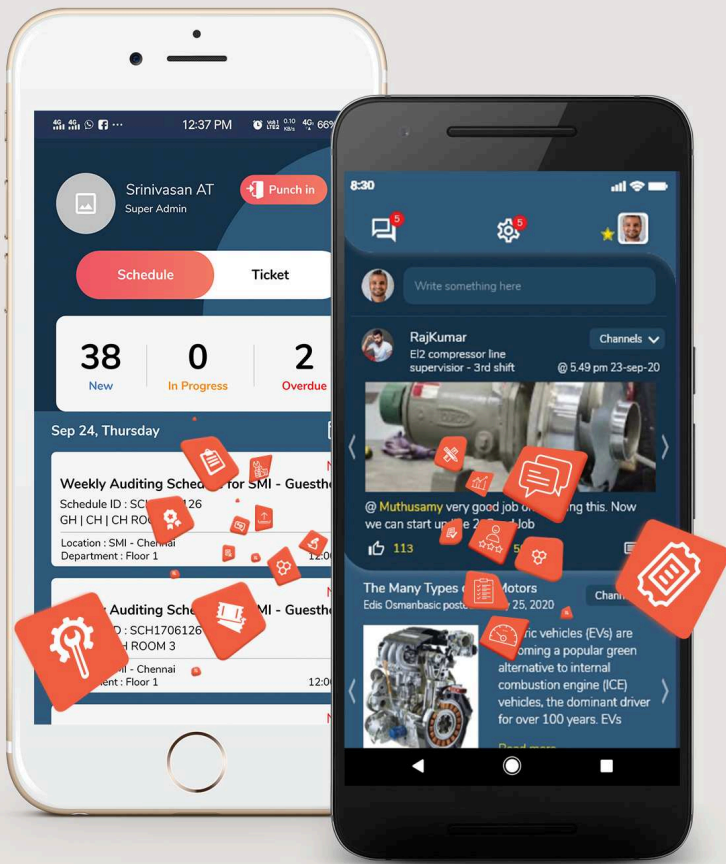

INNOMAINT MOBILE

To capitalize this new smartphone mobile technology, we have built mobile application for Innomaint ; to increase the efficiency of the case management & workflow management processes of Innomaint .

There are two aspects of mobile app Innomaint has, 1) as an end user of the equipment and 2) Service Engineer working on the field. Obviously using mobile app increases the productivity of entire team by better communication process, instant notifications, GPS locator and controlled way to measure the performance of the Service Engineers.

Innomaint Mobile App can be downloaded from Google Play Store for Android and Apple Store for iOS.
